

### AMD Opteron™ Processor-based Server

### Intel Xeon MP Processor-based Server

	AMD Opteron Processor-based Server	Intel Xeon MP Processor-based Server
Architecture	<b>AMD64 with Direct Connect Architecture</b> <ul style="list-style-type: none"> <li>Direct connection of CPUs for up to 8 sockets</li> <li>Provides simultaneous high-performance 32- and 64-bit computing</li> <li>Increases memory performance, provides more balanced I/O throughput, and allows for more linear symmetrical multiprocessing</li> </ul>	<b>IA32 Architecture</b> <ul style="list-style-type: none"> <li>High-performance 32-bit computing only</li> <li>Businesses needing 64-bit benefits must switch to a new architecture</li> </ul>
Memory Access Technology	<b>Integrated Memory Controller</b> <ul style="list-style-type: none"> <li>Memory is directly connected to the CPU providing optimized memory performance</li> <li>Provides low-latency memory access and bandwidth that scales as processors are added</li> </ul>	<b>"Northbridge"-style Memory Controller via Front Side Bus</b> <ul style="list-style-type: none"> <li>Passage through memory controller hub delays memory reads</li> <li>Processors compete for FSB bandwidth</li> <li>8-socket solutions require even more chips</li> </ul>
Primary Bus Technology	<b>HyperTransport™ Technology</b> <ul style="list-style-type: none"> <li>At up to 6.4GB/s bandwidth per link, designed to provide a high-speed connection between processors and core logic with sufficient bandwidth for supporting new and existing interconnects</li> </ul>	<b>Proprietary Hub I/O Buses</b> <ul style="list-style-type: none"> <li>Bridge and hub devices can be overwhelmed by the I/O demands of attached peripherals</li> </ul>
